

## **HEC Hydrogen Sessions**

# Decarbonizing the Gas Grid with Hydrogen April 23, 2021

Brad Bradshaw
President, Velerity
President, Hydrogen Energy Center
brad@velerity.com

# Agenda

**Hydrogen Energy Center** 

Velerity

Renewable Gas Consortium

Natural Gas - Industry Under Pressure

Hydrogen - Savior or Chimera?

Hydrogen Pathways

# Hydrogen Energy Center

HEC is a nonprofit professional society focused on accelerating the hydrogen as an enabling solution for renewable energy

HEC provides public forums, conducts research and implements projects focused on accelerating the clean energy future

# Consider supporting this important effort by becoming a member:

- Influence the course of renewable hydrogen energy technology and policy.
- Be a part of projects that really build hydrogen solutions.
- Have full access to white papers, technical reports, and meeting minutes from our projects and from other organizations.
- Immerse yourself in the hydrogen "goings-on" by connecting with developments & networking with people who are collectively driving the hydrogen "bus".

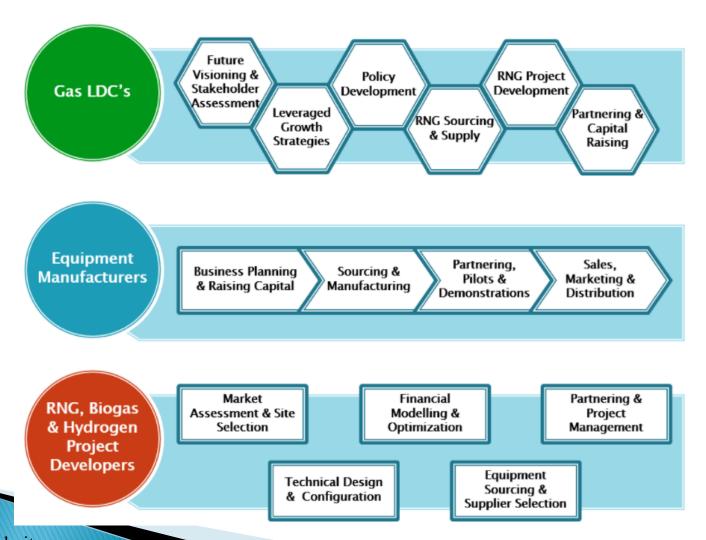

# **Upcoming Hydrogen Sessions**

•	April 23, 2021	Decarbonizing the Gas Grid with Hydrogen
•	April 30, 2021	Bulk Long Duration Storage with Hydrogen
•	May 7, 2021	Decarbonizing Long Haul Trucking with Hydrogen
•	May 14, 2021	100% Hydrogen Pipelines
•	May 21, 2021	Power Production with Hydrogen
•	May 28, 2021	Building a Global Trade in Hydrogen
•	June 4, 2021	Electrolysis and Water Splitting
•	June 11, 2021	Hydrogen Production with Carbon Separation
•	June 18, 2021	Wind to Hydrogen

## **Velerity Services**

# Velerity - Illustrative Clients

TOKYO ELECTRIC POWER COMPANY

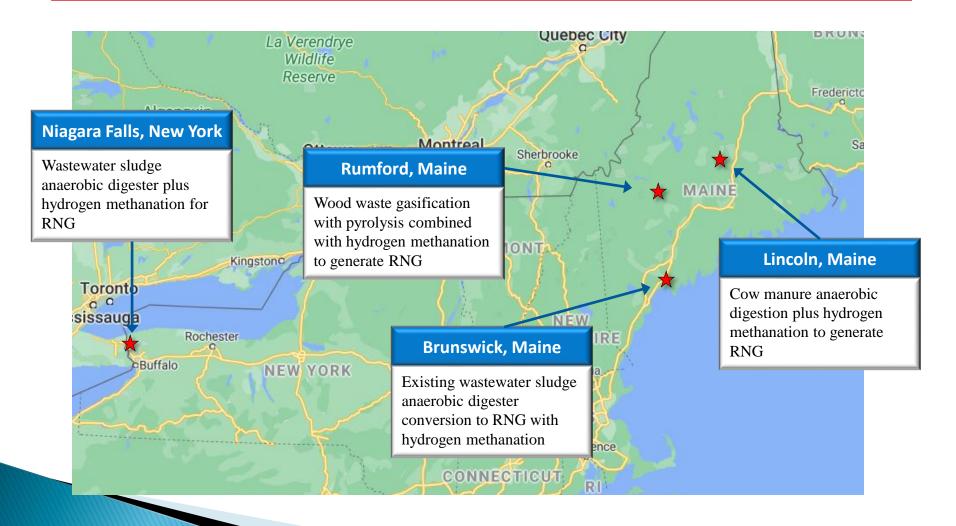

# RNG project work undertaken by Velerity and the Hydrogen Energy Center initially supported by the Connecticut Center for Advanced Technology

# Renewable Gas Consortium - Driving \$10 billion investment in renewable gas, hydrogen and biomethane in the Northeastern United States

#### **Policy Development**

Support regional policies that ensure the energy transition is inclusive, renewable and equitable

#### **Knowledge Forum**

Facilitate information exchanges and forums to give voice and visibility to industry knowledge and solutions

#### **Industry Network**

Facilitate industry collaboration and dialogue to shape policy, knowledge exchange and project development

# Project Development

Facilitate project development from ideation to commissioning and operation

# Hydrogen is emerging as a lynchpin in enabling the zero carbon economy

# Gas Industry Under Pressure

- Bans on new hook ups
- Pipeline reversals
- Calls for electrify everything and significant decarbonization

# Electrify Everything Not Realistic

- Certain industrial processes, old buildings & city centers challenging to electrify
- Winter heating loads will strain grids & credulity

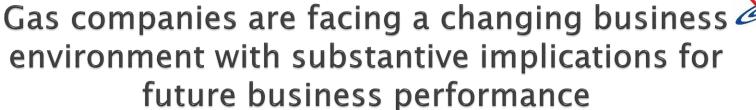

Creating a Technical Need and Economic Pathway for Hydrogen

# Renewable Growth Driving Concerns over System Stability

 Deep decarbonization & high VRE increases need for dispatchable low carbon fuel solution

### Renewable Costs Continue to Fall & Curtailment Continues to Expand

- Solar PPA's have reached 1 cent/kWh
- Wind & solar curtailment in CA now exceeds 1.5 million MWh/year

State Legislatures

Enacting targets for economy wide greenhouse gas emission reductions

#### 2050 CO2 Emission Reduction Targets

NY	-85%	MA -85%	CT -80% ME -80%
RI	-80%	NH -80%	VT -80 to -95%

Local
Governments /
Public Sentiment

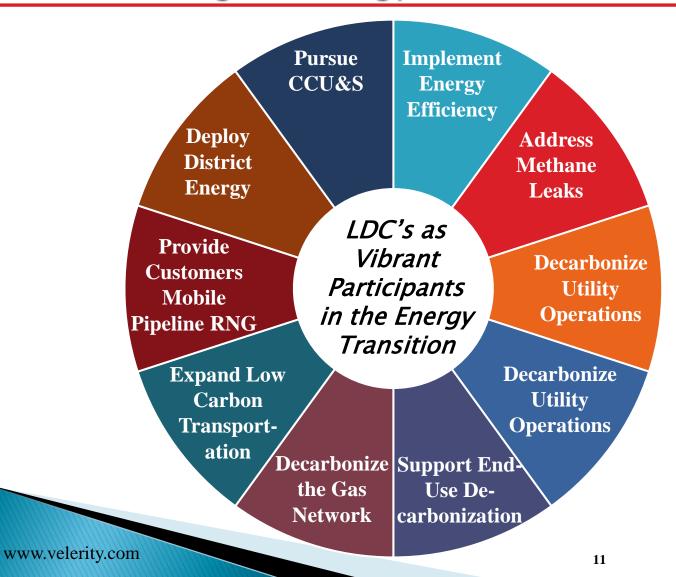

Thwarting plans for pipelines and new customer hookups

Substitution / Electrification

Electrification of building heat and transportation applications expanding

- Summit Withdrew \$90 million pipeline extension
- Liberty Withdrew \$340 million Granite Bridge pipeline project
- Cities that have banned new hookups:
   Berkeley, CA; San Jose, CA; Mountain
   View, CA; Santa Rosa, CA; Brisbane, CA;
   Brookline, MA; Denver, CO; and Seattle,
   WA

# Gas companies have the opportunity to embrace the change, and become vibrant participants in the great energy transition

# Key questions emerge, however, about how gas utilities can to survive in a decarbonized world

Is there a viable business model for LDC's within a carbon constrained economy?

Are there cost effective carbon mitigation technologies, solutions available?

Are there viable markets, customer interest and business models to support decarbonization?

Do adequate suppliers & partners exist?

Is there a regulatory pathway that can be successful?

Are the investment requirements, risks and returns sufficient to attract capital investments?

# What about hydrogen?

# Needs Emerging for Hydrogen Solutions

- Increasing penetration of variable renewable energy
- Challenges decarbonizing a range of heat energy and industrial applications such as steel and cement manufacture
- Interest in decarbonizing industrial uses of hydrogen, especially refining and ammonia production
- Solution for transportation including longdistance trucking, shipping and aviation

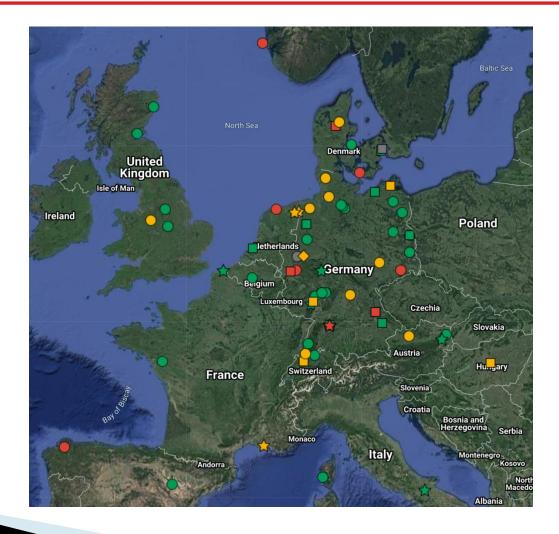

# Power to gas provides the opportunity to solve several vexing energy challenges simultaneously

- Utilizes curtailed wind and solar electricity that would otherwise be wasted
- Creates a valuable product either renewable hydrogen or renewable natural gas
- Reduces carbon emissions
- Addresses electric transmission constraints, expanding opportunities for expanding renewable energy
- Decarbonizes natural gas
- Provides a local "in region" source of natural gas, alleviating or at least mitigating natural gas transmission constraints

# There are approximately 128 power-to-gas projects in Europe

# Global electrolyzer market is accelerating for producing green hydrogen

# Country & EU Electrolyzer Commitments

- 4 Countries plus the EU
- 100.5 GW in Electrolyzer Commitments by 2030

#### Wind to Hydrogen

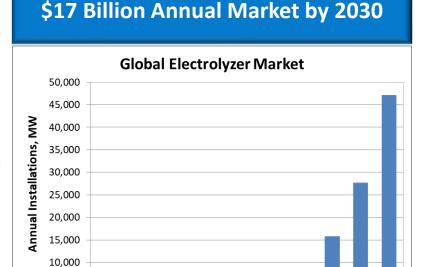

- 7 Projects
- 582 MW in Electrolyzer Capacity

#### **Green Hydrogen to Ammonia**

- 4 Projects
- 16.56 GW in Electrolyzer Capacity

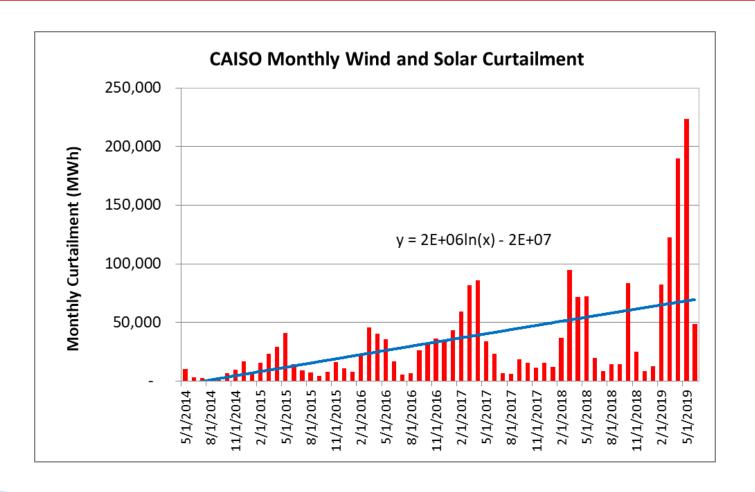

5,000

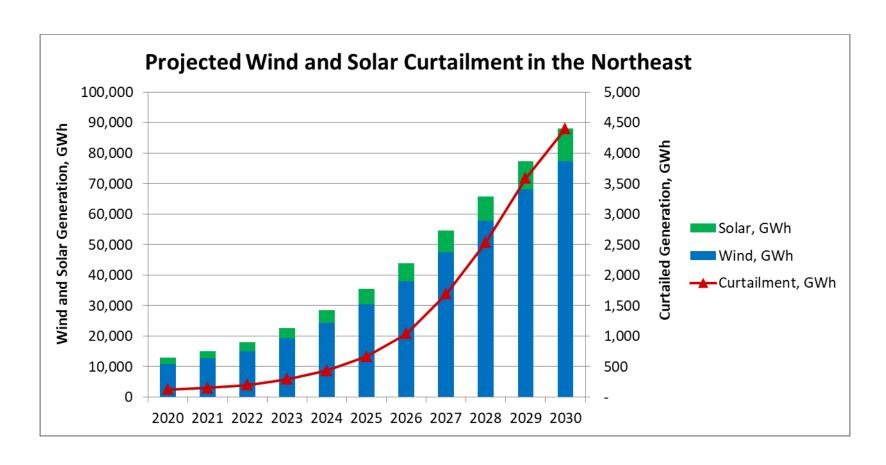

2020 2021 2022 2023 2024 2025 2026 2027 2028 2029 2030

# Renewable energy curtailment growing significantly around the world - the challenge of stranded and low-cost electrons

# Wind and solar curtailment in the Northeast could reach 4,500 GWh by 2030

# What color is your hydrogen?

#### Green hydrogen

**Technology:** Electrolyser **Input:** Renewable electricity

**Process:** Splitting water into hydrogen and air **GHG emissions:** Depends on the GHG emissions from electricity supply

#### Turquoise hydrogen

**Technology:** Methane pyrolysis plant with Carbon Capture and Utilisation (CCU)

Input: Mainly natural gas

**Process:** Splitting methane into hydrogen and solid

carbon

GHG emissions: Depend on the input to generate

the necessary heat

#### Blue hydrogen

**Technology:** (1) Steam Methane Reforming (SMR) plant with Carbon Capture and Storage (CCS); (2) Coal gasification plant with CCS

Input: (1) Natural gas; (2) Coal

**Process:** Converting (1) natural gas/(2) coal into hydrogen and CO<sub>2</sub>

GHG emissions: Low, CO, stored and/or reused

#### Grey hydrogen

**Technology:** (1) Steam Methane Reforming (SMR) plant; (2) Coal gasification plant

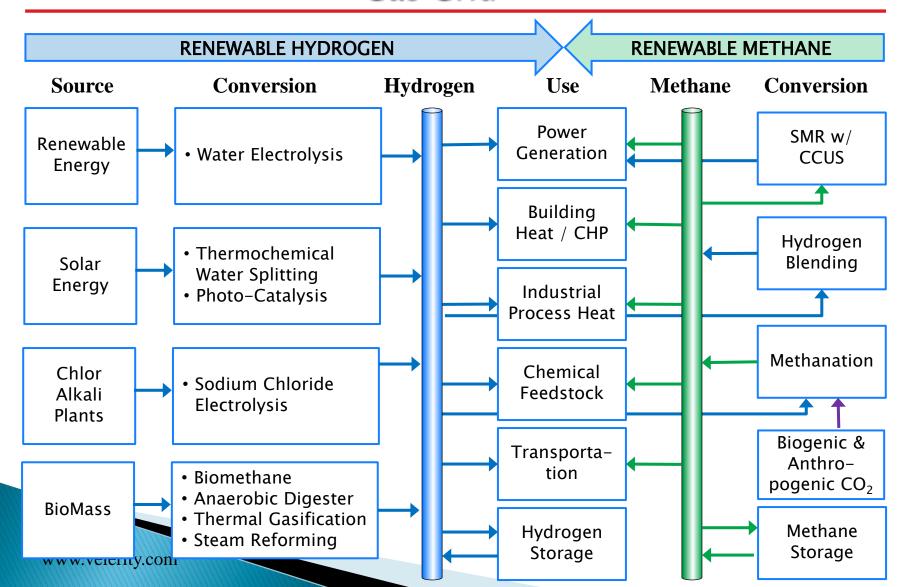

Input: (1) Natural gas; (2) Coal

**Process:** Converting (1) natural gas/(2) coal into

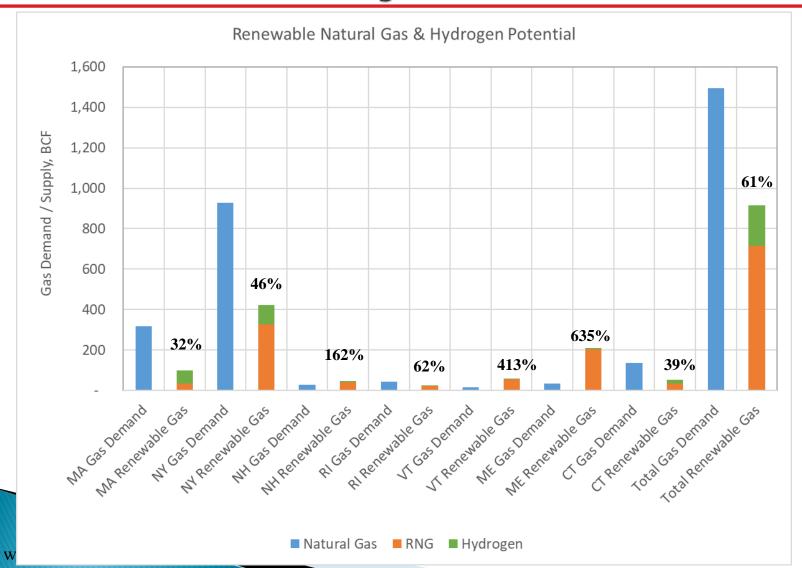

hydrogen and CO<sub>2</sub>
GHG emissions: Yes

# Green Hydrogen Pathways for Decarbonizing the Gas Grid

# Non-Power Generation Natural Gas Demand and Renewable Gas Potential by State and for the Region

# Hydrogen Pathways

- Hydrogen Blending
- ▶ 100% Hydrogen
- Methanation
- Hydrogen Power Production
- Methane Pyrolysis

# Blending

### Keele, England

- HyDeploy Project
- Successfully tested 20% hydrogen by volume on campus setting with 130 buildings

#### ATCO - Alberta Canada

- 5% Blending, 5,000 customers
- Hydrogen source likely blue hydrogen via pipeline

## Enbridge - Markham, Ontario

- Building 6.8 km of pipeline
- 3,600 customers
- 2% by volume
- Utilizing power-to-gas facility built with Cummins in 2018

#### E.On – Germany

Piloting 20% blend to 400 homes

# Blending

#### SoCal Gas & SDG&E

 Announced blending project beginning with 1% hydrogen by volume, increasing up to 20%

### ▶ The ATCO Hydrogen Blending Project – An Overview

- ATCO, a local natural gas distribution system in Alberta, Canada, recently announced they will be investing \$5.7 million in a hydrogen blending project, to provide a mix of hydrogen and natural gas to 5,000 residential customers in Fort Saskatchewan, Alberta. ATCO will blend in up to 5% hydrogen by volume into their pipeline system.
- Based on national statistics for residential natural gas consumption in Canada, and based on blending in 5% hydrogen by volume, it is estimated that each residence will consume 4,512 cubic feet of hydrogen per year. With 5,000 residences as part of the program, total annual hydrogen demand will be approximately 52,190 kilograms per year.

## NREL – HyBlend Project

# 100% Hydrogen in the gas distribution network

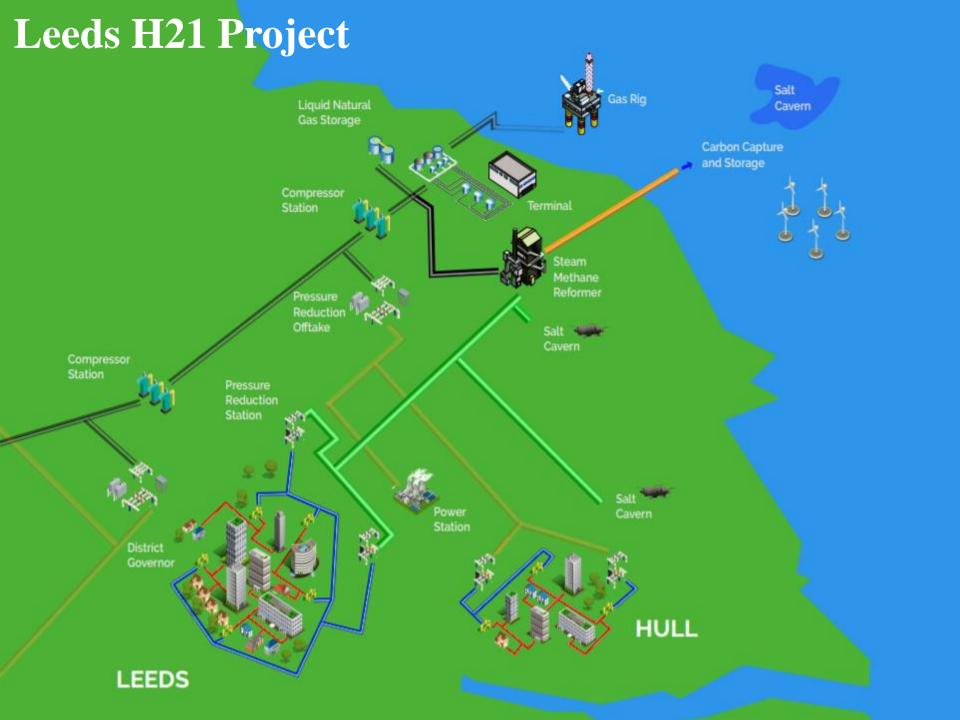

#### H100 Fife in Levenmouth, Scotland

- 300 homes Phase 2 will be 1,000 homes
- Off-shore wind plus electrolysis
- Plans include Liquid Organic Carrier storage, oxygen separation and storage, and hydrogen for transportation

### Gateshead, UK

- Northern Gas Networks & Cadent 2 homes
- H21 Leeds City Gate Leeds, UK
  - Northern Gas Networks 264,000 customers
- Rozenburg, Netherlands
  - Eight electrolyzers
  - 25 apartments
  - Gas fired boiler for backup
- Stad aan 't Haringvliet, Netherlands

550 homes

# 100% Hydrogen - dedicated industrial applications

#### HYBRIT, Lulea, Sweden

 Swedish company HYBRIT is utilizing hydrogen and electricity for steel manufacturing instead of using coking coal and other fossil fuels. They are expected to have the first carbon free steel on the market by 2026.

#### Shell, Eemshaven, Netherlands

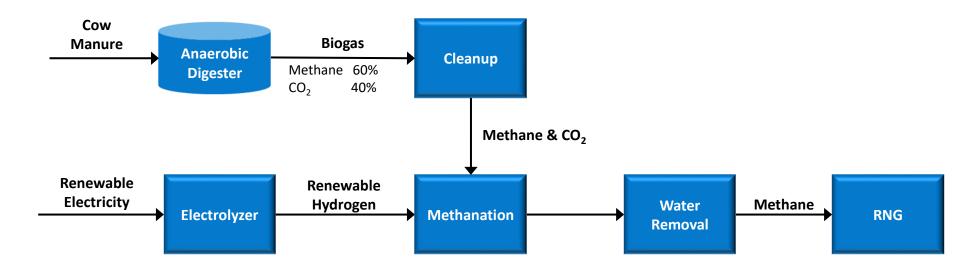

Shell, along with Gasunie and the port of Groningen are the founding partners of the NortH2 project evaluating a project to dedicate 3-4 GW of offshore wind power by 2030 and potentially 10 GW by 2040 dedicated to hydrogen production initially for use in Shell's petrochemical processing plant in Eemshaven.

### Iberdrola & Fertiberia Green Hydrogen to Ammonia

 In Spain, Iberdrola is investing \$174 million to build 100 MW solar facility with 6 GW of electrolyzers to produce hydrogen for ammonia and fertilizer manufacturing.

## **RNG Production with Methanation**

## Methanation

#### Clinton, ME

- Summit Natural Gas, Manure to Methane w/Methanation
- 6,225 cows
- 8 farms

## San Diego, CA

SoCalGas, NREL Bioreactor

### Eugene, OR

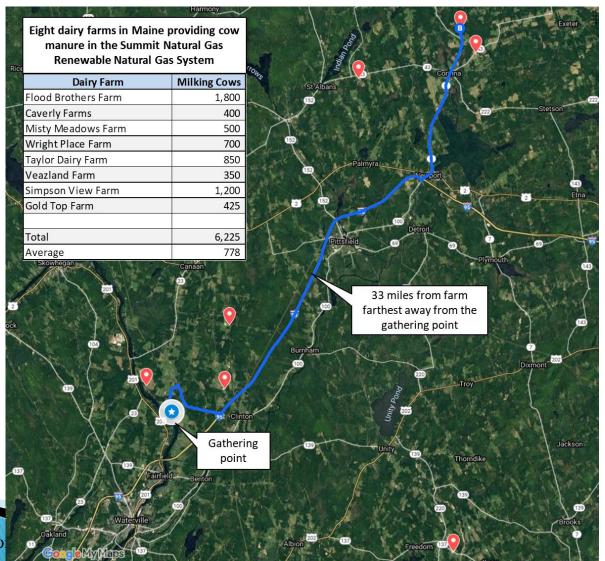

NorthWest Natural, EWEB, 2-10 MW Electrolyzer + Methanation

#### Rotterdam, Netherlands

- Stedin
- Methanation of CO<sub>2</sub> plus Hydrogen to produce methane for 25 apartments

# Summit Gas Manure Gathering System

# Carbon separation utilizing methane pyrolysis

#### Hallam, Nebraska - Monolith Materials

- Plant separates hydrogen and carbon through methane pyrolysis
- Produces 14,000 metric tons of carbon black per year
- Mitsubishi Heavy Industries invested an undisclosed amount in 2020
- Plans a second much larger plant to produce anhydrous ammonia using the hydrogen

#### C-Zero

- Based in Santa Barbara Developing carbon separation technology utilizing methane pyrolysis
- Recently received \$11.5 million investment from Mitsubishi Heavy Industries,
   Breakthrough Energy Ventures, AP Ventures, and Eni Next
- The company has also won \$3 million through two grants from the U.S. Department of Energy, and a \$350,000 project with California utilities Pacific Gas & Electric and Southern California Gas
- C-Zero, after experimenting with molten salts and metals, settled on a molten-nickelbased catalyst in a continuous flow process, he said.
  - C-Zero expects its process to yield hydrogen at a cost of about \$1.50 per kilogram, about the same of gray hydrogen

# Carbon separation utilizing methane pyrolysis

## BASF - Germany

 Chemicals giant BASF is building a turquoise hydrogen pilot plant in partnership with a consortium of German companies and research organizations

## Hazer Group - Australia

 Australian company Hazer Group has won government backing to build a pilot plant testing its own pyrolysis process.

#### TNO - Netherlands

 TNO, in the Netherlands, has developed their EMBER methane pyrolysis process.

# Carbon separation utilizing methane pyrolysis

### **Monolith Materials**

#### **C-Zero**
